CarryMap

CarryMap Builder

Make your ArcGIS maps mobile and available for non-ArcGIS users

10.7 READY

Features and benefits

- Powerful map customization options**
ArcGIS maps can be customized when exported to mobile maps – you can define map extraction boundaries, specify corporate identity, create identification templates and so on.
- All source ArcGIS data preserved**
Mobile maps can be swiftly created from any ArcMap document preserving all source map properties including symbology, attributes, and attachments.
- Advanced map data protection**
Select one or all available options to protect your mobile map – password protection, map availability dates, access for specified devices only.
- Seamless data collection and exchange**
ArcGIS layers can be exported to the open GeoPackage format to store data collected in the field and exchange spatial data with other users inside and outside the company.
- Subscription license** NEW
Subscribe for a year at a lower rate, continue as required.
- Extended identification options** NEW
Use predefined identification templates, create your own ones, and select identification template as default.
